Learner Guide

For

AWS Certified SysOps Administrator Associate Training

TGS Ref No: TGS-2024051413

Conducted by
Tertiary Infotech Academy Pte Ltd.

UEN: 201200696W

Version 3.0

DOCUMENT VERSION CONTROL RECORD

Version Number	Effective Date of Release	Summary of Included Changes	Author
1.0	12 Dec 2024	First version	Tertiary Infotech Academy
2.0	17 Oct 2025	Update company name	Tertiary Infotech Academy
3.0	3 Aug 2026	House design, branding and layout update	Tertiary Infotech Academy

1. Course Overview

The AWS Certified SysOps Administrator Associate Training course provides an in-depth exploration of essential AWS services and tools for managing cloud infrastructure. It covers key areas such as reliability and business continuity, showcasing EC2 high availability techniques, and deployment strategies with CloudFormation. Students will delve into advanced storage solutions with Amazon S3 and EBS, explore security with S3 security protocols, and ensure compliance with best industry standards. The course also emphasizes monitoring AWS applications for performance and disaster recovery planning, with hands-on experience in troubleshooting networking and optimizing AWS infrastructure.

2. Learning Outcomes

By the end of this course, learners will be able to implement reliable AWS cloud solutions, manage security and compliance, and perform effective troubleshooting. They will proficiently deploy and automate services using AWS tools, and analyze infrastructure performance for business continuity and optimal cloud operations.

Upon successful completion of this training programme, learners should be able to acquire the following learning outcomes:

Learning Units (LUs)	Mapping of Knowledge and Abilities Statements
LU1: Reliability and Business Continuity	Topics: ● Topic 1: EC2 for SysOps ● Topic 2: Amazon Machine Image (AMI) ● Topic 3: Managing EC2 at Scale - Systems Manager (SSM) ● Topic 4: EC2 High Availability and Scalability ● Topic 5: Elastic Beanstalk for SysOps LO1: Maintain business continuity of AWS cloud operations to ensure stable service delivery. K5: Virtualisation technologies A3: Maintain availability and performance of cloud computing operations and to ensure secure services with no unplanned downtime A5: Implement and release cloud computing operations changes
LU2: Deployment, Provisioning, and Automation	Topics: ● Topic 6: CloudFormation for SysOps ● Topic 7: EC2 Storage and Data Management - EBS and EFS ● Topic 8: Amazon S3 ● Topic 9: Advanced Amazon S3 and Athena ● Topic 10: Advanced Storage ● Topic 11: CloudFront

Learning Units (LUs)	Mapping of Knowledge and Abilities Statements
	• Topic 12: Database for SysOps LO2: Implement secure AWS cloud infrastructure setup such as data loading and performance monitoring. K1: Cloud computing infrastructure components and technologies A1: Implement data loading, security, performance monitoring and tuning, capacity planning, backup and recovery
LU3: Security and Compliance	Topics: • Topic 13: Amazon S3 Security • Topic 14: Security and Compliance for SysOps • Topic 15: Identity LO3: Apply service quality standards to ensure security and compliance of AWS cloud operations. K3: Installation, configuration and troubleshooting of software packages supporting cloud computing infrastructures A7: Implementation of service quality standards
LU4: Monitoring, Logging, and Remediation	Topics: • Topic 16: Monitoring, Auditing and Performance • Topic 17: AWS Account Management • Topic 18: Disaster Recovery LO4: Analyze and resolve processing issues to ensure continuity and disaster recovery in AWS cloud applications. K4: Design, configuration, maintenance and troubleshooting of cloud computing applications A4: Analyse processing issues and data anomalies and identify solutions A6: Implement IT risk management measures for business continuity and disaster recovery
LU5: Networking and Content Delivery	Topics: • Topic 19: Networking - Route 53 • Topic 20: Networking VPC LO5: Troubleshoot networking performance issues at scale for optimal AWS infrastructure operation. K2: Installation, configuration and troubleshooting of cloud computing infrastructures A2: Implement performance diagnostics and troubleshooting at scale in live environment

3. Learning Units / Topics

LU1: Reliability and Business Continuity

- Topic 1: EC2 for SysOps
- Topic 2: Amazon Machine Image (AMI)
- Topic 3: Managing EC2 at Scale - Systems Manager (SSM)
- Topic 4: EC2 High Availability and Scalability
- Topic 5: Elastic Beanstalk for SysOps

LU2: Deployment, Provisioning, and Automation

- Topic 6: CloudFormation for SysOps
- Topic 7: EC2 Storage and Data Management - EBS and EFS
- Topic 8: Amazon S3
- Topic 9: Advanced Amazon S3 and Athena
- Topic 10: Advanced Storage
- Topic 11: CloudFront
- Topic 12: Database for SysOps

LU3: Security and Compliance

- Topic 13: Amazon S3 Security
- Topic 14: Security and Compliance for SysOps
- Topic 15: Identity

LU4: Monitoring, Logging, and Remediation

- Topic 16: Monitoring, Auditing and Performance
- Topic 17: AWS Account Management
- Topic 18: Disaster Recovery

LU5: Networking and Content Delivery

- Topic 19: Networking - Route 53
- Topic 20: Networking VPC
